

Protecting and improving the nation's health

## Clinical Epidemiology Webinar Series

## Using data tools and evidence to reduce variation in health outcomes

Public Health England's Clinical Epidemiology team oversee the production of evidence and intelligence across four main areas: The Variation and Value Service, National End of Life Care Intelligence Network, Learning Disabilities Observatory and Liver Disease Intelligence.

We are launching a new series of **free online webinars**. Each webinar will consist of an overview of the topic, with the opportunity to ask questions and get answers from the presenter and the webinar host. The webinars will be live and last for no more than one hour. These will be held between **2 and 3 pm**.

By joining the webinar participants should become more familiar with the work of the Clinical Epidemiology Team. You will also develop skills and knowledge in using our data and information to understand variation in health care. This will be particularly useful in preliminary investigative work, planning and service monitoring.

### The following webinars are now taking bookings:

Launch of the Diagnostic Atlas of Variation	Thursday 27 October
The NEOLCIN focus on end of life care in care homes	Thursday 24 November
Using GP data to explore service variation for learning disabilities	Wednesday 14 December
Introducing the Liver Framework and Atlas of Variation	Thursday 26 January
Using data to understand variation in end of life care: Introducing the new End of Life Care Atlas of Variation	Wednesday 22 February
Launch of the Diabetes Atlas of Variation	Wednesday 22 March
