

Protecting and improving the nation's health

Data tool: Trends in leading causes and place of death, Strategic Clinical Networks, England 2005 to 2014

What it is: An MS Excel based tool and user guide describing leading causes and place of death in Strategic Clinical Networks (SCNs) across England.

Why we made it: To provide the greater detail and trends that our stakeholders have requested.

What it is for: To highlight trends, volumes and variations by leading cause and place of death.

Data sources: ONS mortality data is presented by age, sex and leading cause of death group, as absolute numbers and proportions from 2005 to 2014.

What it can help with: Interactively investigate by SCN, sex, age group, and 50 leading causes of death to inform planning, development and reconfiguration of end of life care services in England and across SCNs.
